

Grow Tubes play an integral part of a grow practice. The advantages of grow tubes have been well documented:

“ Grow tubes have shown some distinct advantages for establishment. Grow tubes get the vine off to a quick start by promoting upright, rapid growth without the added labor of tying to stakes. During dry periods with-out irrigation they can provide moisture at the base from condensation that aids in establishment. The tubes also protect young vines from pests such as rabbits and deer if other means of protection are not in place. From the new grower’s standpoint, maybe their best attribute is to reduce the danger to the vine when applying post-emergence or contact herbicides. ”

Dr. Joeseph A. Fiola  
University of Maryland

We work with regional producers to continually meet market needs.

We understand the trust that the grower is placing in us and our product and strive to provide best in class service.

We value our relationships with our customers.

**Your success is our success.**

The combination of Polyform, Inc.'s high quality custom plastic extrusion service and the rich agricultural setting of the Pacific Northwest has yielded product lines for the industry ranging from irrigation parts to vineyard supplies.

Over the past 35 years, Polyform has worked directly with agricultural product distributors to develop customized product lines to meet the needs of their customer base.

Contact us if you have a product design or are looking for the distributor of the below listed products:

- Irrigation Piping
- Single wall and Corrugated Grow Tubes
- Plant Ties and Tie Tubing

Plant Protectors**

*Protect, Survive, Thrive*

## Traditional Grow Tube

Our traditional non-slit grow tube can be manufactured to custom lengths. This grow tube comes nested in groups of five units boxed and palletized for easy handling.

## Slit Grow Tube

The Slit Grow Tube consists of a patent pending locking system that ensures the plant's protection from nature's elements. This grow tube is shipped in rolls of 25 and bagged in bundles of 100. This grow tube takes up less storage space making it ideal for storage and transportation.

Our slit grow tube line of products include:

- Locking Vented Grow Tube
- Adjustable Width Grow Tube
- Large Diameter Grow Tube

## Locking Vented Grow Tube

The patent pending vented feature in this grow tube promotes air flow while providing protection from chemicals.

## Adjustable Width Grow Tube

The Adjustable Width Grow Tube comes engineered with a patent pending three tab locking system providing three potential diameters providing a product that can be used at multiple stages in the plant life cycle.

## Large Diameter Grow Tube

Our Custom Width Grow Tube is ideal for the nursery industry. It runs 13" tall and can be made to any custom width providing a safe alternative for wide base plants.

## Grow Tube Features

- Single Wall Construction
- Polyethylene Material
- 3-5 year UV Protection
- Herbicide/Pesticide Resistant
- 1.5" Stake Slits
- Colors: Green or Tan
- Customizable Length
- Designed for an array of staking and assembly options
